

Practice Tasks

Inductive Logical Reasoning
(scales clx)

How To Use This Document

General Information

This document is designed to support you in preparing for your online inductive logical reasoning assessment. It provides an overview of the assessment explaining what it measures and how it works.

It also provides 5 practice questions. After these practice questions, solutions and rationale have been provided to help you gain a deeper understanding. We would encourage you to attempt all the practice questions without looking at the solutions first.

Inductive Logical Reasoning

Aon's Inductive Reasoning assessment measures your ability to recognize patterns among a group of items.

In the assessment, you will receive instructions along with three practice tasks that you can repeat as many times as you like before you start the actual assessment.

How Does The Inductive Logical Reasoning Assessment Work?

You are presented with two 3x3 example grids. These grids are filled with simple shapes, and both follow a specific rule. You are asked to figure out the rule, and then select which of four other grids follows this rule.

There are always exactly two grids that follow the rule. Once you have worked out the correct grids, you can select them. You can unselect a grid if you change your mind. When you are happy with your selection, you can click to proceed to the next question.

There is no set number of questions; the system will continue to give you a new question every time you complete one. The test may also get more difficult as you progress.

Guidance for the Practice Questions

The actual assessment you will take is timed, and there are an unlimited number of questions – you just need to work quickly and accurately, to try to get as many correct as possible in the time provided. However, there is no specific time limit in the practice tasks. Try to focus and complete them quickly in a single session. Note that many of the practice tasks, and those in the assessment itself, are quite straightforward. You should aim to work through them quickly as well as accurately.

You should write down your answers as you work through, so that you can compare your answers to the solutions at the end.

To continue to practice, spend more time reviewing the example tasks and solutions provided here. You may also want to consider other patterns that could show up and what they might look like. To continue to practice more broadly, spend time trying to find and apply rules. This can be done for example by using brain puzzles and playing strategy games that include tasks where it is not obvious what to do.

Practice Tasks

Example 1

These two grids follow a rule

Yellow circle	Blue cross	Blue cross
Red square	Blue cross	Blue cross
Green triangle	Blue cross	Blue cross

Red square	Blue cross	Blue cross
Green triangle	Blue cross	Blue cross
Yellow circle	Blue cross	Blue cross

Which two of these grids follow the same rule?

Yellow circle	Blue cross	Blue cross
Green triangle	Blue cross	Blue cross
Red square	Blue cross	Blue cross

Green triangle	Blue cross	Blue cross
Yellow circle	Blue cross	Blue cross
Red square	Blue cross	Blue cross

Red square	Blue cross	Blue cross
Blue cross	Green triangle	Blue cross
Yellow circle	Blue cross	Blue cross

Blue cross	Blue cross	Yellow circle
Blue cross	Blue cross	Green triangle
Blue cross	Blue cross	Red square

Example 2

These two grids follow a rule

Red square	Red square	Red square
Red square	Red square	Red square
Green triangle	Yellow circle	Blue cross

Green triangle	Green triangle	Green triangle
Green triangle	Green triangle	Green triangle
Yellow circle	Blue cross	Red square

Which two of these grids follow the same rule?

Green triangle	Blue cross	Blue cross
Blue cross	Yellow circle	Blue cross
Red square	Blue cross	Blue cross

Yellow circle	Yellow circle	Yellow circle
Yellow circle	Yellow circle	Yellow circle
Red square	Blue cross	Green triangle

Red square	Green triangle	Blue cross
Blue cross	Blue cross	Blue cross
Yellow circle	Blue cross	Blue cross

Blue cross	Blue cross	Blue cross
Blue cross	Blue cross	Blue cross
Yellow circle	Green triangle	Red square

Example 3

These two grids follow a rule

Yellow Circle	Green Triangle	Yellow Circle
Red Square	Blue Plus	Red Square
Yellow Circle	Green Triangle	Yellow Circle

Yellow Circle	Blue Plus	Yellow Circle
Red Square	Green Triangle	Green Triangle
Yellow Circle	Blue Plus	Yellow Circle

Which two of these grids follow the same rule?

Yellow Circle	Blue Plus	Yellow Circle
Green Triangle	Yellow Circle	Yellow Circle
Red Square	Blue Plus	Yellow Circle

Yellow Circle	Green Triangle	Yellow Circle
Red Square	Red Square	Green Triangle
Yellow Circle	Blue Plus	Yellow Circle

Yellow Circle	Green Triangle	Yellow Circle
Green Triangle	Red Square	Blue Plus
Yellow Circle	Blue Plus	Yellow Circle

Green Triangle	Blue Plus	Yellow Circle
Yellow Circle	Red Square	Blue Plus
Yellow Circle	Green Triangle	Yellow Circle

Example 4

These two grids follow a rule

Yellow Circle	Red Square	Red Square
Green Triangle	Blue Plus	Green Triangle
Yellow Circle	Red Square	Red Square

Blue Plus	Yellow Circle	Yellow Circle
Blue Plus	Red Square	Red Square
Green Triangle	Yellow Circle	Yellow Circle

Which two of these grids follow the same rule?

Yellow Circle	Green Triangle	Green Triangle
Blue Plus	Red Square	Yellow Circle
Red Square	Green Triangle	Green Triangle

Yellow Circle	Green Triangle	Yellow Circle
Red Square	Red Square	Red Square
Red Square	Blue Plus	Green Triangle

Blue Plus	Green Triangle	Green Triangle
Green Triangle	Yellow Circle	Red Square
Green Triangle	Blue Plus	Yellow Circle

Green Triangle	Blue Plus	Blue Plus
Yellow Circle	Red Square	Green Triangle
Yellow Circle	Blue Plus	Blue Plus

Example 5

These two grids follow a rule

Solutions & Rationale

Example 1 - Solution

These two grids follow a rule

Which two of these grids follow the same rule?

Answer: Top-left and top-right grids

Rationale: The two example grids both have six blue pluses in every space in their second and third columns. Of the possible answers, all have six blue pluses. However, the bottom two do not have them in the same positions as the examples.

Example 2 - Solution

These two grids follow a rule

Which two of these grids follow the same rule?

Answer: Top-right and bottom-right grids

Rationale: In the example grids, the same shape always fills the top six spaces. On the top example it is red squares, and on the bottom example it is green triangles. Therefore, the two correct answers must have the same shapes in their top six spaces.

The top-right answer has yellow circles in all the correct positions. The bottom-right answer has blue pluses in all the correct positions. The two incorrect answers both have six blue pluses, but these are not always in the correct positions.

Example 3 - Solution

These two grids follow a rule

Which two of these grids follow the same rule?

Answer: Top-right and bottom-left grids

Rationale: In the example grids, there is a yellow circle in all four corners. In the possible answers, all have yellow circles in some of their corners. However, only two have yellow circles in all four corners. Therefore, these must be the correct answers.

Example 4 - Solution

These two grids follow a rule

Which two of these grids follow the same rule?

Answer: Top-left and bottom-right grids

Rationale: Both example grids have the same shape filling four spaces. In the top grid, red squares fill these places, and in the bottom grid yellow circles fill these spaces.

In the possible answer grids, only two of the grids have consistent shapes across these four spaces – in the top-left grid it is green triangles, and in the bottom-right grid it is blue pluses.

Example 5 - Solution

These two grids follow a rule

Which two of these grids follow the same rule?

Answer: Bottom-left and bottom-right grids

Rationale: Both example grids have a large number of one specific shape. For the top example grid it is yellow circles, and for the bottom example it is blue pluses. They are not all in the exact same position, but this is the clearest feature of these.

Counting the majority shape shows you that there are seven in each example grid. Therefore, the answers must be the grids with seven of a specific shape. The bottom-left grid has seven triangles, and the bottom-right grid has seven squares.

Checking the top grids, neither have more than five of the same shape. As such, these cannot be correct.
